Experiment -10

Student Information System Using Zoho One (SaaS)

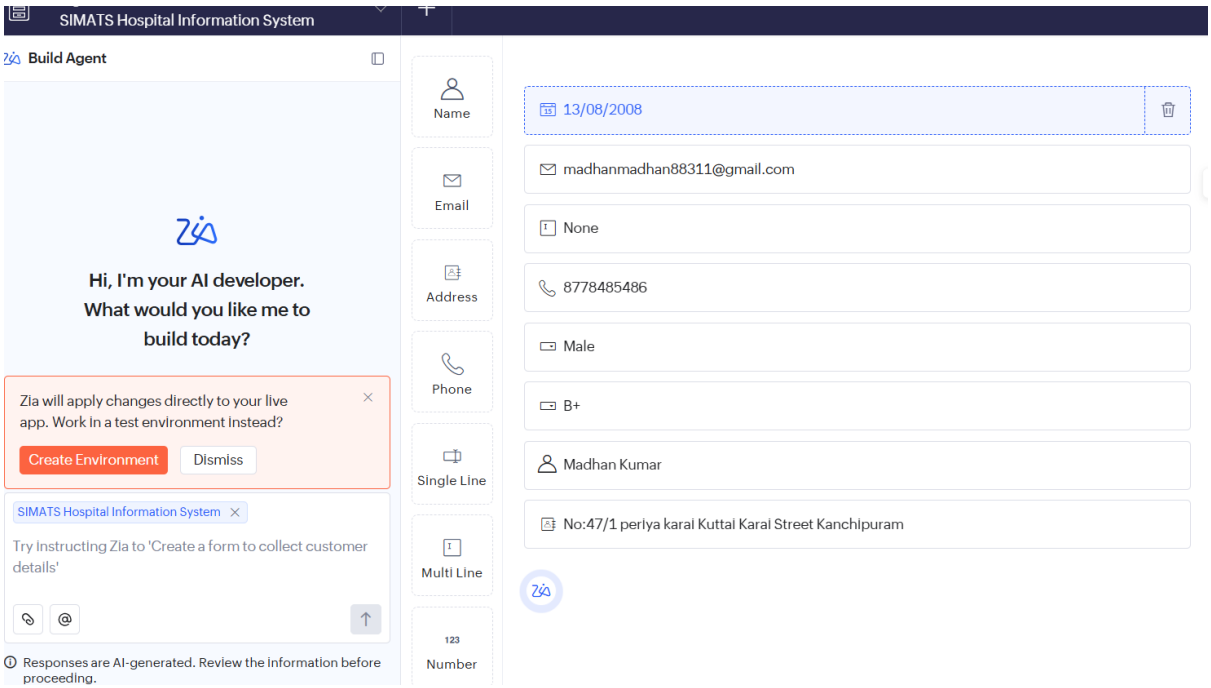

Aim

To create a **Student Information System** using **Zoho One** as a cloud-based Software as a Service (SaaS) application.

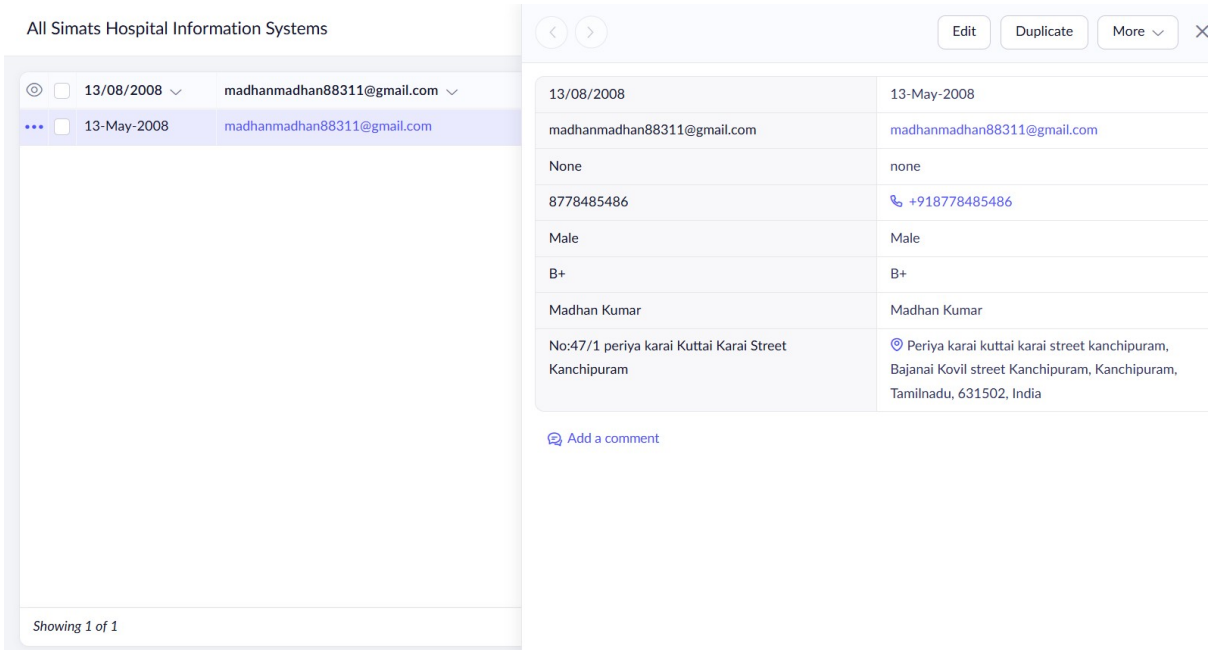

Procedure

1. Access the Zoho One cloud platform using valid login credentials.
2. Navigate to the Zoho Creator application from the Zoho One dashboard.
3. Start a new application and name it **Student Information System**.
4. Create a form to collect student, course, grade and attendance information for the student information system.
5. Add necessary fields such as student name, register number, address, phone, age, courses, grades, attendance, progress report, and semester mark sheet.
6. Select suitable field types, such as name, email, phone, address, single-line, multi-line, number, date, and dropdown fields.
7. Customize the form layout to make it simple and user-friendly for students and staff to fill in.
8. Configure the form settings and save the application.
9. Publish the application to make the student information form accessible to users.
10. Fill in the form with sample student details, such as name, register number, phone, address, age, and courses.
11. Submit the student information and check whether the records are saved correctly in the cloud database and displayed in the Student Information report.
12. Perform multiple student entry tests to ensure the system operates properly as a Software as a Service (SaaS) application.

Implementation Input:

Output:

Result

Thus, a **Student Information System** was successfully created using **Zoho One** and demonstrated as a **Software as a Service (SaaS)** application.
