Experiment -4

SIMATS Library Using Zoho One (SaaS)

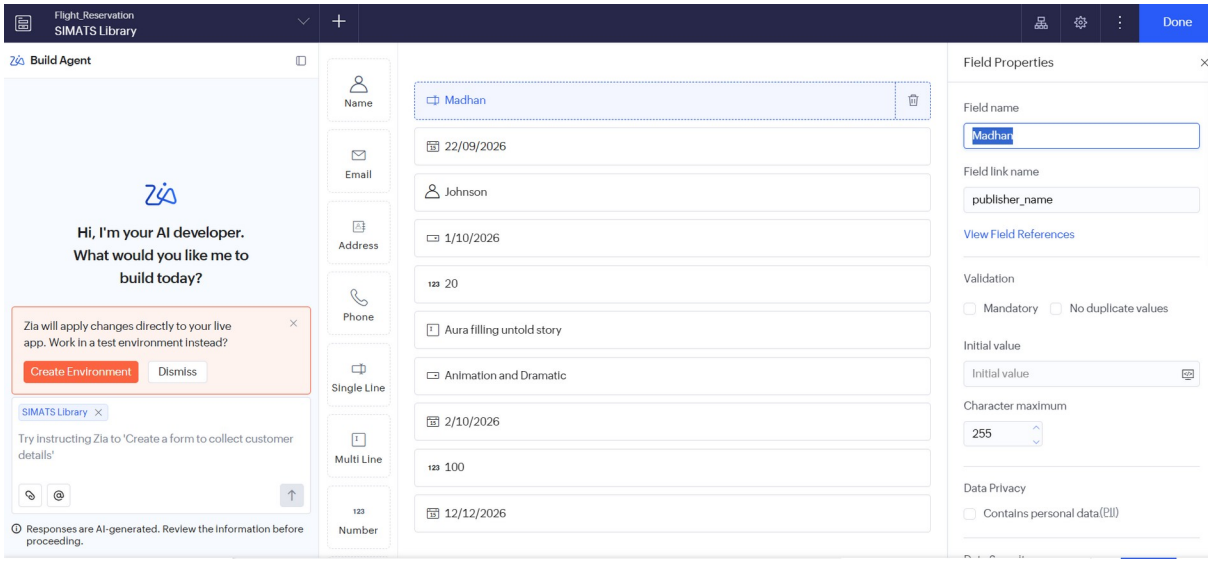

Aim

To create a **SIMATS Library** using **Zoho One** as a cloud-based Software as a Service (SaaS) application.

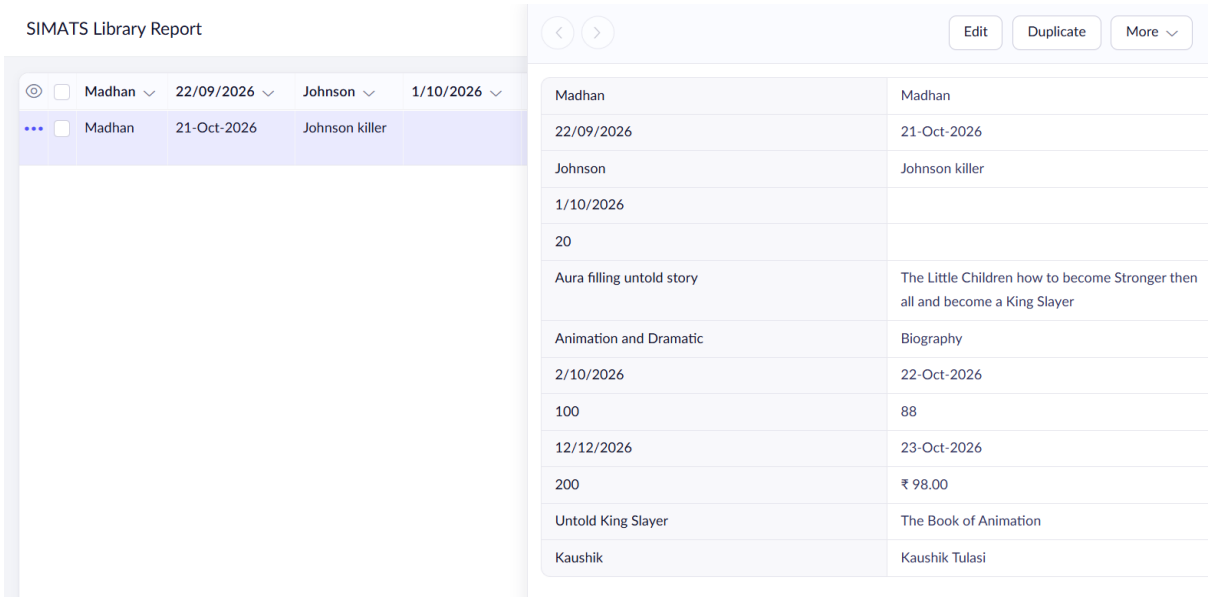

Procedure

1. Access the Zoho One cloud platform using valid login credentials.
2. Navigate to the Zoho Creator application from the Zoho One dashboard.
3. Start a new application and name it **SIMATS Library**.
4. Create a form to collect book, student and book reservation information for the SIMATS library.
5. Add necessary fields such as title of the book, author, publication, year, edition, number of copies, rack number, student name, issue date, return date, and status (taken/returned).
6. Select suitable field types, such as name, single-line, multi-line, dropdown, number, date, and decimal fields.
7. Customize the form layout to make it simple and user-friendly for students and librarians to fill in.
8. Configure the form settings and save the application.
9. Publish the application to make the library book reservation form accessible to users.
10. Fill in the form with sample book and student details, such as book title, author, rack number, and issue and return dates.
11. Submit the book reservation information and check whether the records are saved correctly in the cloud database and displayed in the SIMATS Library Report.
12. Perform multiple book entry tests to ensure the system operates properly as a Software as a Service (SaaS) application.

Implementation Input:

Output:

Result

Thus, a **SIMATS Library** was successfully created using **Zoho One** and demonstrated as a **Software as a Service (SaaS)** application.
