Experiment -9

SIMATS Hospital Information System Using Zoho One (SaaS)

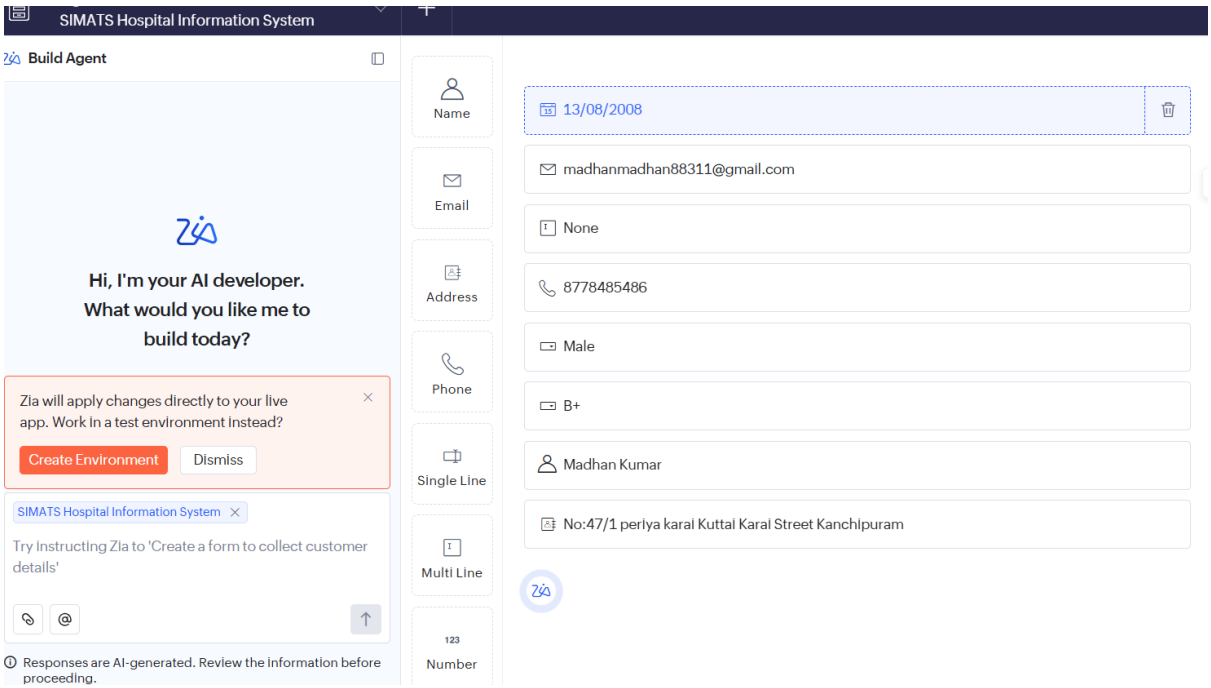

Aim

To create a **SIMATS Hospital Information System** using **Zoho One** as a cloud-based Software as a Service (SaaS) application.

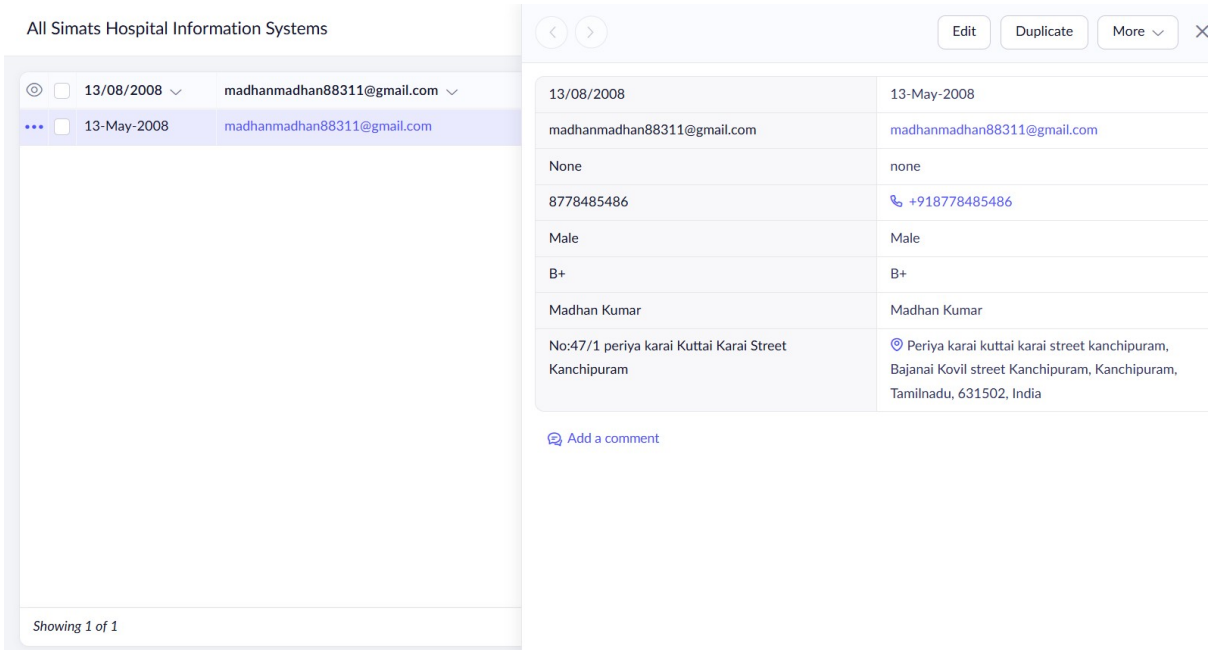

Procedure

1. Access the Zoho One cloud platform using valid login credentials.
2. Navigate to the Zoho Creator application from the Zoho One dashboard.
3. Start a new application and name it **SIMATS Hospital Information System**.
4. Create a form to collect patient, attender and doctor information for the SIMATS hospital.
5. Add necessary fields such as patient name, date of birth, age, gender, blood group, address, phone, email, attender name, attender phone, doctor name, and disease.
6. Select suitable field types, such as name, email, phone, address, single-line, multi-line, number, date, and dropdown fields.
7. Customize the form layout to make it simple and user-friendly for patients and hospital staff to fill in.
8. Configure the form settings and save the application.
9. Publish the application to make the hospital information form accessible to users.
10. Fill in the form with sample patient details, such as name, date of birth, phone, email, address, and blood group.
11. Submit the patient information and check whether the records are saved correctly in the cloud database and displayed in the All SIMATS Hospital Information Systems report.
12. Perform multiple patient entry tests to ensure the system operates properly as a Software as a Service (SaaS) application.

Implementation Input:

Output:

Result

Thus, a **SIMATS Hospital Information System** was successfully created using **Zoho One** and demonstrated as a **Software as a Service (SaaS)** application.
